

TheriForm™ Products - Blood Wicking Capability

TheriForm™ products rapidly wick blood and marrow components. The TheriForm™ products have a unique internal architecture that allows for the rapid wicking of blood prior to implantation. Pre-soaking the implants in blood helps provide essential nutrients, growth factors and osteoprogenitor cells.

Blood Wicking Characteristics

- Unique implant architecture promotes rapid soaking throughout.
- Structures with macro channels retain blood & marrow.
- Implants maintain structural integrity and handling strength.
